

I strongly feel the FCC should not consider the National Association of Broadcaster's Petition 04-160 regarding restricting Satellite radio broadcast of real time traffic and weather conditions. With the state of traffic congestion across the nation, it should be a national priority and objective of the FCC to ensure there is widespread distribution of this type of information on as many broadcast outlets as possible, including satellite radio. It would be a true set back for the US Government to restrict the convenient distribution of this vital information.
